# Agroverse B2B Email Outreach — Send Activity & Funnel

**Prepared for:** Julio Almeida · **Source:** Hit List workbook (live) · **Date:** 2026-09-29

Read-only snapshot of the retail-partner cold-outreach (warm-up) system. All figures read live from the *Hit List*, *Email Agent Drafts*, and *Email Agent Follow Up* tabs.

## Stores at each funnel stage (all 680 rows)

| Stage | Stores | % of 680 |
|---|---|---|
| 0 - Raw discovery (Research) | 47 | 6.9% |
| 1 - Screened out (No fit 179 / Not Appropriate 74 / Reclassified 1) | 254 | 37.4% |
| 2 - Need contact data (Contact Form found 119 / Enrich-manual 95) | 214 | 31.5% |
| 3 - Qualified, ready to send (AI: Warm up prospect) | 63 | 9.3% |
| 4 - Contacted / in follow-up (Manager Follow-up 37 / Followed Up 1) | 38 | 5.6% |
| 5 - Soft-engaged (Instagram Followed) | 11 | 1.6% |
| 6 - Replied / in conversation (AI: Prospect replied) | 2 | 0.3% |
| Parked (On Hold 19 / Deferred 2) | 21 | 3.1% |
| Lost (Rejected) | 16 | 2.4% |
| Converted (Partnered) | 14 | 2.1% |
| **Total** | **680** | **100%** |

## Send activity (all-time)

| Metric | Value |
|---|---|
| Warm-up first touches sent | 994 |
| ..of which auto-sent (system) | 917 |
| ..of which human-sent | 77 |
| Total send-log entries (incl. 71 follow-ups) | 1,185 |
| Queued for human review now (13 warm-up / 27 follow-up / 5 replied) | 45 |
| Current member reply rate (historic peak ~6%) | ~0.3% |

## Send cadence - warm-up first touches per month

| Month | Sends |
|---|---|
| 2026-04 | 3 |
| 2026-05 | 115 |
| 2026-06 | 155 |
| 2026-07 | 228 |
| 2026-08 | 209 |
| 2026-09 | 213 |
| 2026-10 (partial) | 71 |

Drip cap is 12/day, weekdays only - keeps sender reputation safe and smooths reply load.

## Key findings

• **Top leak is contact data, not interest:** 261 of 680 stores (38%) sit in *Contact Form found* / *Enrich-manual* / *Research* with no usable email yet - they never reach outreach.

• **Machine half works:** discovery, AI screening, and drip-safe sending are all automated; ~1,000 sends with zero deliverability incidents.

• **Reply rate collapsed ~6% to ~0.3% and sat undetected for ~6 weeks** - the promised 30-day readout after auto-send graduation was never run. Now instrumented (warmup_conversion_readout.py + scheduled workflow).

• **Partners come from replies, not sends:** all 14 current partners trace back to a human conversation; the fastest-handled reply became a partner.

## How the loop is meant to work

1. **Discover** - Google Places Nearby appends candidate venues (Status = Research).
2. **Screen** - AI photo/fit review kills non-fits (No fit signal / Not Appropriate).
3. **Enrich** - find a contactable email for survivors.
4. **Draft** - Email360 generates a first-touch draft; the 12-rule linter checks it.
5. **Send** - clean drafts auto-send (drip, capped, kill-switched); flagged ones wait for human review.
6. **Reply** - any prospect reply is drafted by AI but ALWAYS human-approved and sent.
7. **Convert** - a genuine conversation becomes a Partnered store.

**Principle:** allocate human attention by demonstrated prospect intent, not by pipeline stage.

*Counts are current status labels, not a strict monotonic funnel - treat as directional.*
